Aging Indicator

Part No. 25200000

Application field	Shows the aging process of VOSS-helmets by UV radiation
Material	Specially developed indicator foil
Function	The aging indicator is divided into three parts. The reference area on the left side shows the original colour, the indicator area in the middle changes its colour and the right side indicates the required exchange. In case the colour of the indicator area and the one around the dustbin match the exchange of the helmet is recommended.

AGING INDICATOR
red colour = perfect condition
change of colour to
orange = condition ok
yellow = replace helmet

The recommendation to exchange the safety helmet latest after five years remains valid.

For specific safety helmet models	For all safety helmets of the VOSS-HELME product portfolio made of Polyethylene: INAP-Master, INAP-Defender, INAP-Profler and the special models based on them as well as the VisorLight (for this model without surcharge)
Application	On the back side of the safety helmets
Delivery	The aging indicator is delivered mounted on the ordered safety helmets. Only samples can be provided without helmet.

The photo shows an example of a mounted aging indicator on a VisorLight.
